

Depression & Brain Function

This study seeks depressed participants to test the effects of the combination of repetitive transcranial magnetic stimulation (TMS) and psychotherapy on brain function.

This inpatient and/or outpatient study involves daily visits for 8 weeks followed by once-monthly visits for 3 months.

Study participation includes:

- research evaluations and brain scans
- active TMS and psychotherapy, or inactive TMS and psychotherapy
- follow-up interviews

You may be able to participate if you are:

- ages 18-65 with major depressive disorder
- free of other serious medical conditions
- on or off anti-depressants

No cost to participate, compensation is provided. The study is conducted at the NIH in Bethesda, Maryland, and is enrolling participants nationwide, from across the United States. Travel arrangements are provided and costs are covered (and vary by distance.) Contact us to find out if you qualify, or for more information.
